SKILLS

Java | Python | JavaScript | TypeScript | SQL | React.js | .NET | Spring boot | JUnit | MySQL | Oracle Database | Scikit-learn
AWS | Git | Github Actions | Jenkins | Linux | Windows | Docker | Terraform | Backend | Frontend | Fullstack | DevOps

EXPERIENCES

YJMood (Vancouver, BC, Canada)

03/2024 - Present

Senior Software Engineer (Contract Full-time)

- Managed projects from planning to deployment, ensuring meeting deadline and customer satisfaction
- Mentored junior team members and conducted code and document reviews to ensure quality and consistency
- Achieved a 20% cost reduction by changing monolithic server for files to AWS S3
- Developed microservices architecture(MSA) environments using AWS ECS with AWS Fargate and Terraform
- Designed, developed and maintained e-commerce web application using Java Spring Boot and AWS MySQL RDS, resulting in a 20% boost in user engagement

LG CNS (Seoul, South Korea)

07/2020 - 02/2024 (3 yr 8 mo)

Software Engineer (Permanent Full-time)

Project 1 - Real-time Logistics Visualization Project

- Led a team of 4 developers to successfully complete a system to enhance problem-solving and efficiency within logistics operations using Java, leading to a 25% reduction in delivery times
- Applied AWS SQS for queuing and event processing to gather real-time data, increasing data processing speed
- Integrated Elastic Search to enable search capabilities and real-time analytics, enhancing efficiency
- Implemented video calling feature using WebRTC and multi-party messaging system with WebSocket, including real-time translation features
- Developed Spring Boot with MyBatis and AWS RDS to enhance database interaction efficiency, resulting in a 20% improvement in query performance
- Enhanced system stability by implementing load balancing to effectively distribute traffic

Project 2 - Constructing System for Pharmaceutical Manufacturing

- Implemented Module Federation in React.js to provide independent systems, allowing flexible adaptation to various pharmaceutical manufacturing processes with front-end components styled using HTML and CSS, reducing integration time by 35%
- Refactored APIs following MVC architecture using .NET and AWS RDS, improving system reliability by 30%
- Implemented CI/CD pipeline for automated deployment process using Jenkins and AWS EC2
- Built REST APIs and conducted unit and integration testing with JUnit, reducing bug occurrences by 30%
- Developed graph and chart visualizations using Chart.js for statistical data representation

PORTFOLIO

Meme Museum - Team Project (meme-log.netlify.app)

11/2023

- A website where you can search for and explore Korean memes using React.js, Vite and TypeScript

An AI-based program developed to assess the reliability of reactor pressure vessel

09/2018 - 08/2020

- Website program developed a web-based application using Django, integrating AI capabilities for analyzing seismic loads using Python on nuclear pressure vessels

EDUCATIONS

Master of Artificial Intelligence

09/2018 - 08/2020

Sungkyunkwan University, Suwon, South Korea

Bachelor of Mechanical Engineering

03/2013 - 02/2018

Kyungpook National University, Daegu, South Korea

PUBLICATION

A stress intensity predictive model for reactor pressure vessel via coupled signal processing and machine learning model, Journal of Mechanical Science and Technology

06/2023

- Proposing a stress intensity regression model using signal extraction and machine learning techniques to enhance nuclear power plant safety and prevent radiation leakage accidents.
- link.springer.com/article/10.1007/s12206-023-0514-6

ACHIEVEMENTS

Excellence Award in Data Analysis

Jinju, South Korea, 12/2019

Excellence Medal at Engineering Poster Competition

Jeonju, South Korea, 04/2017
